Heimdal™ Security Product Sheet

Heimdal™
Email Security

Great email security made easy.

Heimdal™ Email Security will keep your inboxes clean and lean.

Over 55% of all incoming emails are spam, seeping your attention away from the legitimate ones. But beyond the wasted time, spam emails are also dangerous.

Eliminate the hassle and danger of churning out spam emails and allow your employees to just focus on the work that matters.

Heimdal™ Email Security is the professional spam and email malware filter solution that corporate environments can now rely on. The multiple analysis vectors apply technological expertise to scan for all possible cues and seamlessly filter spam out of your organization's inboxes.

Step up now and stop spam and email malware. We're here to help.

Heimdal™ Email Security uses an entire array of technologies to detect and block spam, malware and ransomware threats before they compromise your IT system through malicious emails.

Compatible with our advanced technology for combating fraud. The advanced spam and malware filter Heimdal™ Email Security is also compatible with Heimdal™ Email Fraud Prevention, a module especially designed to combat the growing threat of Business Email Compromise (BEC) attacks.

Spam emails are today a growing threat:

They flood inboxes, diminish productivity and bring a host of cybersecurity dangers like malware, ransomware or phishing. A professional spam and malware filter keeps all that safely away.

Gain deep visibility across your endpoints and network.

Increased visibility over endpoint availability and health signifies decreased chances of malicious actions. Heimdal's Email Security does more than safeguarding your inboxes from undesirable emails. With a 0.05% false-positive rate, ESECT protects against phishing and botnet attempts, auto-locks your account on outbound spam detection.

User-oriented actions are also available such as domain blacklisting and personal quarantine for suspicious email elements.

Email Security by Heimdal™ is the only integrative and unified solution that continuously scans email activity, searching for malicious code and fraud attempts.

Each suspicious incident will be labeled by the solution and submitted for in-depth analysis. With a large variety of granular controls and filters at your fingertips, you email inboxes will be safeguarded from inside and outside threats.

Your business and employees will be spared from:

- The pervasive, evolving threat of phishing.
- Email exploits & botnet attacks.
- Unwanted content.
- The again-growing threat of ransomware.
- The frustration of having to click away through never-ending spam emails.
- Botnet attacks through email.
- Malicious links and attachments.
- Emails coming from infected IPs and / or domains.
- Advanced spam.

55% **OF ALL INCOMING EMAILS** in an organization are spam.
Source: Statista

76% **OF ALL BUSINESSES** have reported being a victim of a successful phishing attack in the last year.
Source: Retruster

1.5 **MILLION NEW PHISHING SITE** Around 1.5 million new phishing sites are created each month and then used in email spam.
Source: Webroot

90% **OF ALL DATA BREACHES** Phishing attacks lie behind 90% of all data breaches.
Source: Retruster

3.86 **MILLION COST OF DATA BREACH** The average cost of a data breach for companies globally is $3.86 mil. without accounting for non-financial costs.
Source: IBM

91% **OF ALL CYBER-ATTACKS** on companies begin with a spear-phishing email.
Source: TrendMicro

Ensure digital safety starting with the first entry-point into your infrastructure: emails.

Raise employee awareness on spam and malware-laced emails, but don't rely on it. All it takes is one distracted moment for criminals to have their way.

Heimdal™ Email Security will keep guard, so you don't have to.
