

An Entire Security Ecosystem

AT YOUR FINGERTIPS

Endpoint Prevention, Detection and Response (E-PDR).

The golden standard in cybersecurity.

[Learn more](#)

Hello,

Heimdal Security aims to provide the latest technologies for cutting edge cybersecurity, in a unified and easy to use package. Cybersecurity is complicated, but we believe our clients should get the best technologies without needing to sacrifice precious hours in order to make it all work.

As threat actors become more cunning and the inner workings of cyberattacks progress, so must we. Regrettably, standard EDR or XDR have become inconsequential. Prevention is more efficient than detection and response these days, and that's exactly what Heimdal brings new to the table.

APTs, zero-day attacks, phishing, Business Email Compromise (BEC), or advanced malware are barely covered by standard security tools. But now you can replace scattered solutions with one: **Heimdal's E-PDR**.

[Learn More](#)

Heimdal builds on Microsoft's security, adding invaluable security layers such as Threat Prevention, DNS security, and globally managed Patch & Asset Management to protect businesses from next day threats.

Since its early days, Heimdal's offering has been designed with a "one-agent-for-all" approach in mind. This implies that all of the technologies contained in our full E-PDR system come in one easy-to-deploy and lightweight agent that will not slow down your systems and will help you save huge amounts of time.

From a compliance and security standpoint, you get even more enhancements with **Heimdal's Privilege Access Management (PAM) and Application Control** features. The optional Remote Desktop Control enables you to support your users anytime and anywhere.

We also offer an automated patch management solution covering both third-party applications and Microsoft vulnerabilities. **Heimdal Patch & Asset Management** fully automates third-party patching, allowing a granular control over your software environment.

In contrast to conventional cybersecurity protection methods, like Antivirus and Firewalls, E-PDR brings greater visibility into your endpoints and enables faster response times when threats arise.

With **Heimdal Threat Prevention - Endpoint**, you can reap the benefits of Machine Learning-driven intelligence and DNS protection, full vulnerability and software assets management, and global software deployment.

Finally, **Heimdal Next-Gen Antivirus & MDM** will add four extra security layers of advanced malware detection and live process monitoring.
